

## Triple-Flex Series Pressure Drop Curves Triple-Flex Pressure Drop

1. Indicates the maximum flow based on a 10° F delta T at 90% minimum efficiency.
2. Indicates the maximum flow, 270 gpm, before damage may occur to the paddle type flow switch. A thermal flow switch will be required for flows greater than 270 gpm.
3.  $GPM = \text{Boiler Output} / (500 \times \text{delta T})$
